

## Appendix C. Corn Harvest Method Comparisons

Table C1. Comparison of corn yields obtained by hand harvest and combine harvest conducted at Pine City, Fall 2003.

	Yield estimate from hand harvest (bu/A) corrected to 15% moisture	Yield from field harvest with combine (bu/A) $\Phi$ corrected to 15% moisture	Difference (%) between hand harvest estimate and combine harvest
Plot 1 (Integra 7175)	56.1	63.0	-11.0
Plot 2 (Canamaize)	37.7	38.6	-2.3
Plot 3 (Integra 7175)	40.5	39.5	+2.5
$\Phi$ The wheat combine header lost about 25% of corn cobs during harvesting, so the yield was adjusted to account for this.
